M3TECH SMS GATEWAY:

- Integration to front-end and legacy systems is carried out via a range of simple, flexible Application Programming Interface (API) connections. These offer choice of connections (HTTP/S, SMTP, FTP, XML, Web Service) which are quick and easy to implement and are suited to a wide spectrum of usage.
- The user-friendly web based interface allows customers to manage all API connections, monitor your campaigns, view reports, make online payments, receive invoices, add sub-users and more.
- Choose from different message routing profiles to suit budget and redundancy requirements
- Provide additional code scripts for use with all interfaces and support integration with excellent specification documents and tutorials.
- M3TECH SMS gateway delivers to 79 countries worldwide and supports two-way SMS messaging in over 10 countries.

Mobile Business Solutions

M3TECH SMS Gateway provides a comprehensive suite of business solutions for diversified industry verticals offering enterprise level connectivity with all major mobile network operators to over 500 global networks.

The capability of M3TECH Business solutions offers a breakthrough to develop SMS as a business solution tool with wide application. Through these business solutions, the mobile phone user is able to extract his personal, updated data directly from any business solution subscribed via a personal secured identification code. Interactive SMS can be used in various different environments including securities, insurance, freight forwarding, retail plus many other business scenarios that require one(1) and two (2) communication between corporations and their customers/subscribers.
